IT Security Handbook (fictional sample)

Chapter 1: Scope
This handbook applies to all staff, contractors and interns who use computers owned by the organisation. It covers passwords, devices, e-mail and incident reporting.

Chapter 2: Passwords

Passwords must contain at least 12 characters and must be changed every 90 days. Passwords may not be reused for at least five cycles. Two-factor authentication is mandatory for e-mail and remote access.

## Chapter 3: Devices and data

Laptops must use full-disk encryption. USB storage devices are blocked by default; exceptions require approval from the IT manager. Confidential documents may only be processed with approved local AI tools, never with public cloud chatbots.

Chapter 4: Reporting incidents

Suspected phishing e-mails must be reported within one hour using the 'Report phishing' button.

Lost or stolen devices must be reported to the IT helpdesk at extension 555 immediately, 24 hours a day.
